## OBJECTIVE

This document is aimed for cloud developers (beginners or seasoned) and DevOps professionals.

The objective of this exercise is to demonstrate the steps to deploy and test an S/4HANA Cloud extension in SAP Business Technology Platform, Kyma Runtime.

## SCENARIO

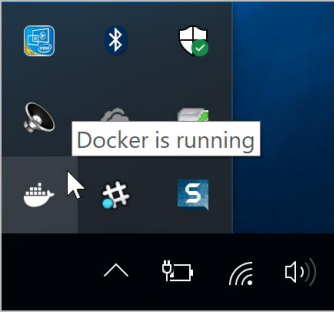

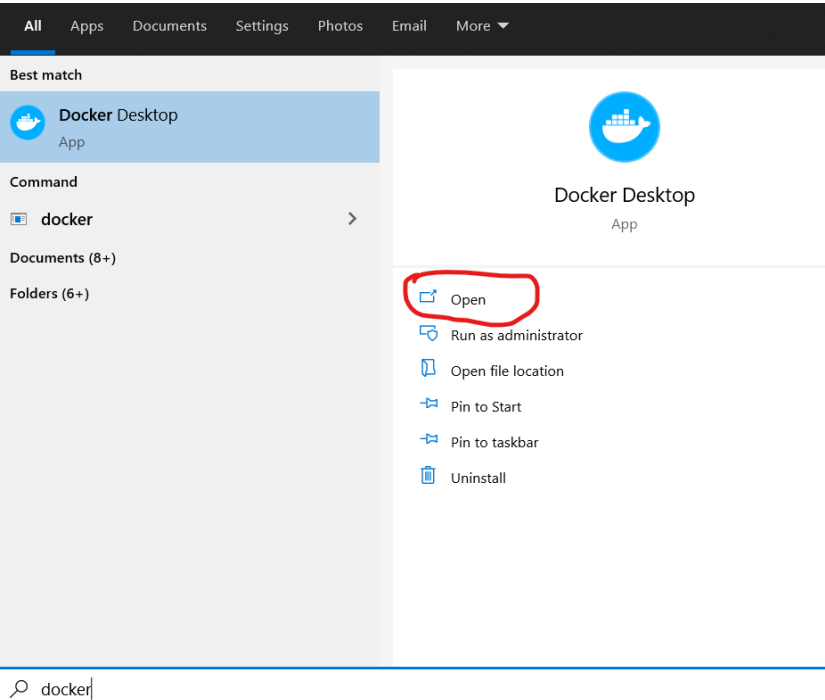

The S/4HANA Cloud extension is a simple Business Partner Management app, managing exclusively records of category “Person” and using only S/4HANA master data as persistence (nothing stored on the extension side, thus dismissing any database for persistence). It simply leverages the S/4 Business Partner OData service to execute the CRUD operations directly in the S/4 system, so it’s quite simple.

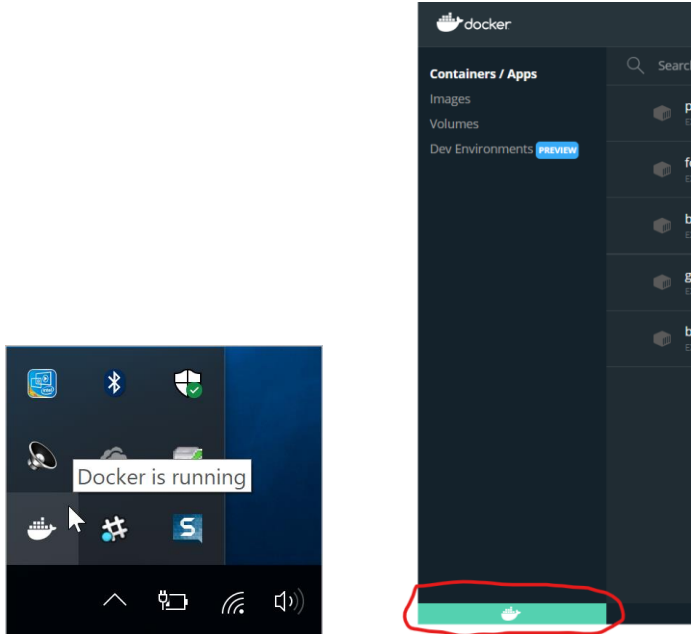

App components:

1. **Frontend UI: SAP Fiori Elements HTML5 app** based on the List Report/Object page templates. No coding on the UI – everything is interpreted from the backend service annotations by the Fiori Elements engine.
2. **Backend service: Cloud Application Programming Model app** with simple a service exposing an OData entity
3. **Create and update operations: Serverless Function** deployed directly in Kyma and invoked either directly or through an event message via event subscription. The event publishing can occur either from inside or outside the cluster (in the second case it uses another serverless function exposed outside the cluster via API Rule). All of this is determined through an environment parameter set upon application deployment.

## PREREQUISITES

- Have an **S/4HANA Cloud tenant** available with an active **communication user** set for inbound communication in a **communication arrangement** which is based on the communication scenario **SAP\_COM\_0008** (see: <https://help.sap.com/viewer/0f69f8fb28ac4bf48d2b57b9637e81fa/2108.501/en-US/fab3fd449cf74c6384622b98831e989e.html?q=communication%20arrangement>) – this is required to access the Business Partner OData Service v2.
  - How to get an S/4HANA Cloud trial: <https://www.sap.com/products/s4hana-erp/trial.html>
- Create an SAP BTP trial account: <https://developers.sap.com/tutorials/hcp-create-trial-account.html>
- Enable SAP BTP, Kyma Runtime: <https://developers.sap.com/tutorials/cp-kyma-getting-started.html>
- Set up local development environment using VS Code: <https://developers.sap.com/tutorials/btp-app-set-up-local-development.html>
- Install Kubectl: <https://kubernetes.io/docs/tasks/tools/>
- Install Helm Charts: <https://helm.sh/docs/intro/install/>
- Install Make tool (Windows users):
  - Install Chocolatey: <https://chocolatey.org/install>
  - Run: **choco install make**.
- Install Docker Desktop: <https://www.docker.com/products/docker-desktop/>
- Install Docker extension in VS Code: <https://code.visualstudio.com/docs/containers/overview>
- Create an account on Docker Hub: <https://hub.docker.com/>
- Make sure Docker Desktop is running locally successfully.

Explanation	Screenshot
<p>Ensure docker symbol in windows taskbar.</p> <p>If not already running, please follow the steps here below.</p>	
<p>Search docker desktop and click Open</p>	

Explanation	Screenshot
Click docker icon and check green status	

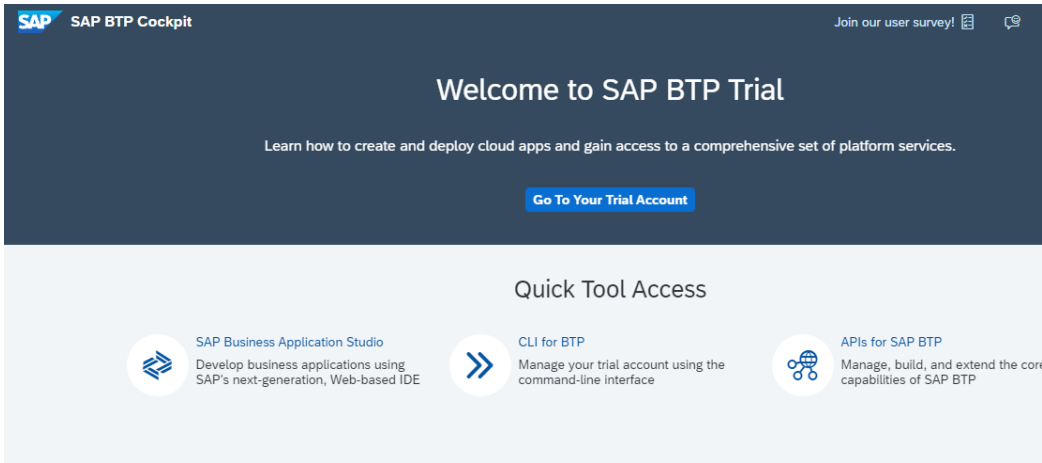

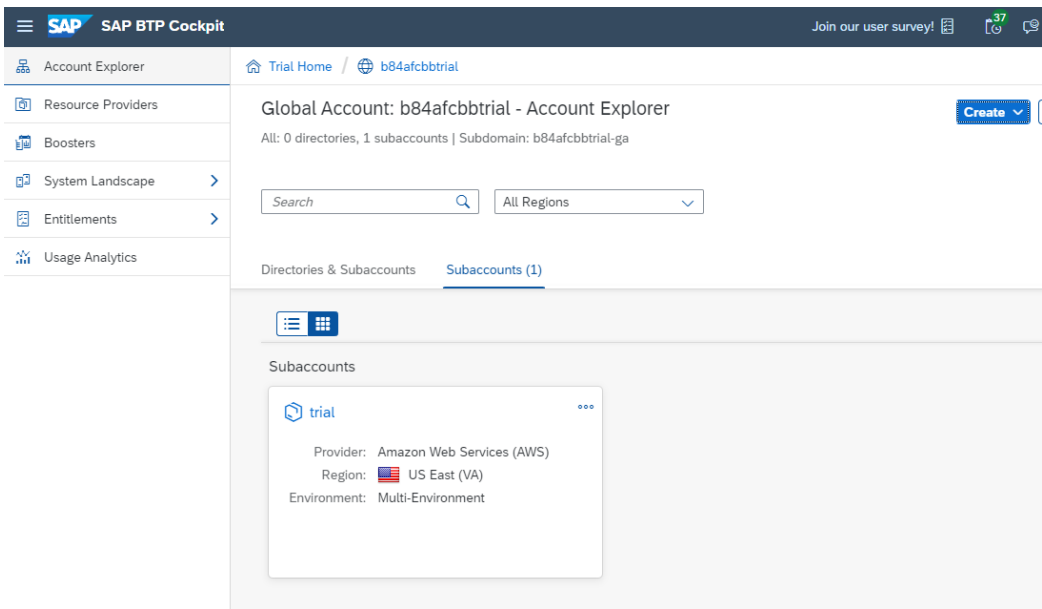

## WARNING

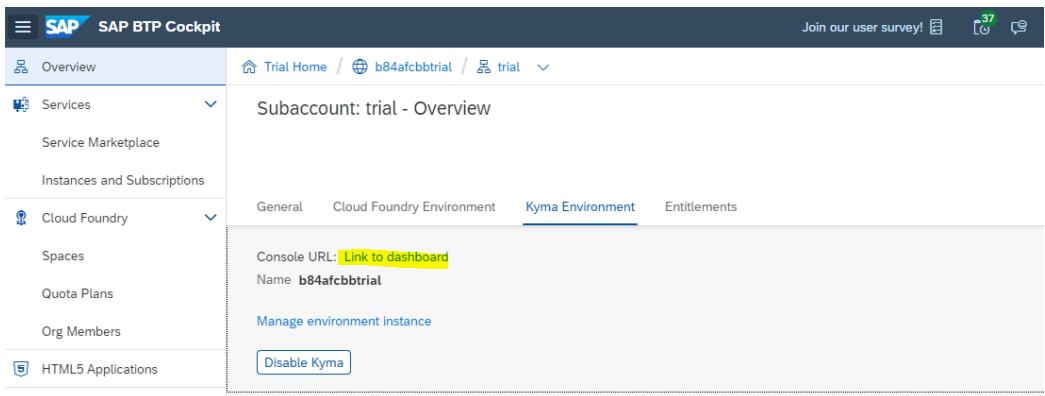

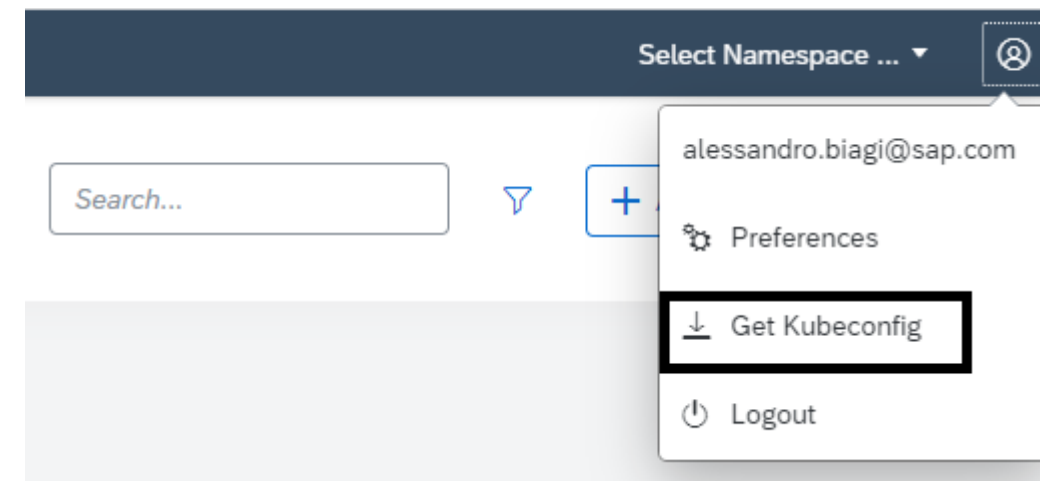

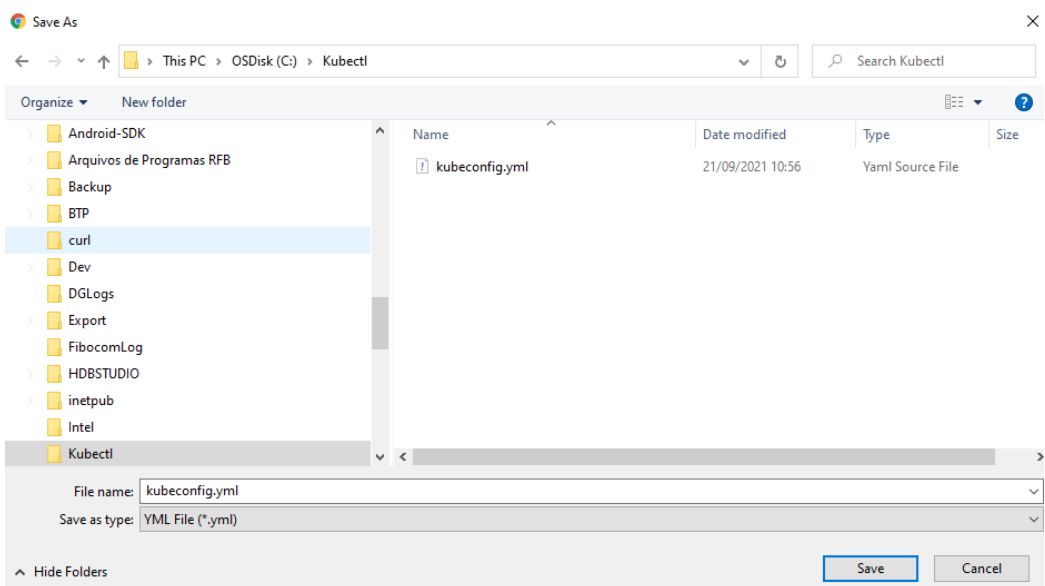

Failing to comply to any of the listed pre-requisites will prevent you from completing the exercise! Therefore, after completing each tutorial/document, make sure that everything you did is working properly!

## EXERCISE

### I. Set up Kubernetes context to point to the Kyma cluster

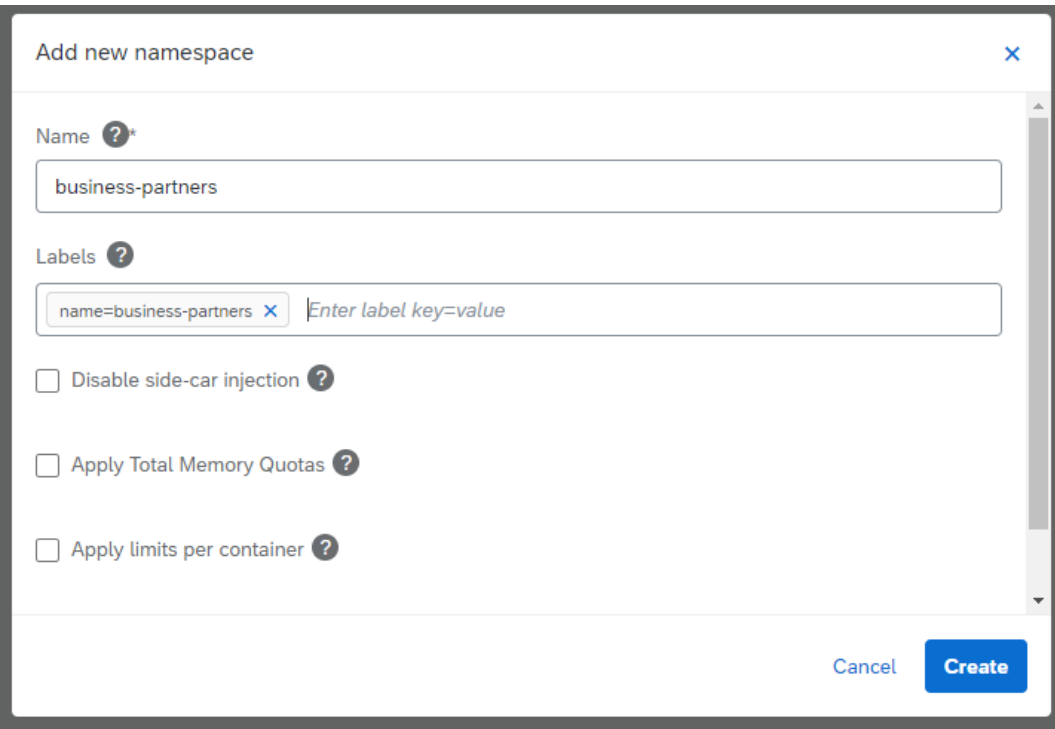

Explanation	Screenshot
Create a folder on your hard-drive to store the <b>kubeconfig.yml</b> file (there's an <b>example</b> of a folder named "C:\Kubectl" in the screenshot).	
Set two system environment variables ( <b>examples</b> in the screenshot): <ul style="list-style-type: none"> <li>• <b>kubectl=&lt;your folder path&gt;</b></li> <li>• <b>KUBECONFIG=&lt;your r folder</b></li> </ul>	

Explanation	Screenshot
<p><b>path&gt;\kubeconfig.yml</b></p> <p><b>Note:</b> variable names are case-sensitive!</p>	
<p>Open your BTP trial account cockpit and click <b>Go To Your Trial Account</b></p>	
<p>Click on your subaccount</p>	

Explanation	Screenshot
<p>Select the <b>Kyma Environment</b> tab and click the link: “<b>Link to dashboard</b>”</p>	
<p>In the Kyma Console UI click on the “little head” icon on the top right corner and select <b>Get Kubeconfig</b></p>	
<p>Save the kubeconfig.yml file in the folder you created.</p> <p><b>Note:</b> if the file is already there due to a previous access just <b>overwrite it</b>. <b>Do not change the file name!</b></p> <p>These two steps to save the config file are required about 12 hours after each access to the cluster as the file token expires after that period..</p>	

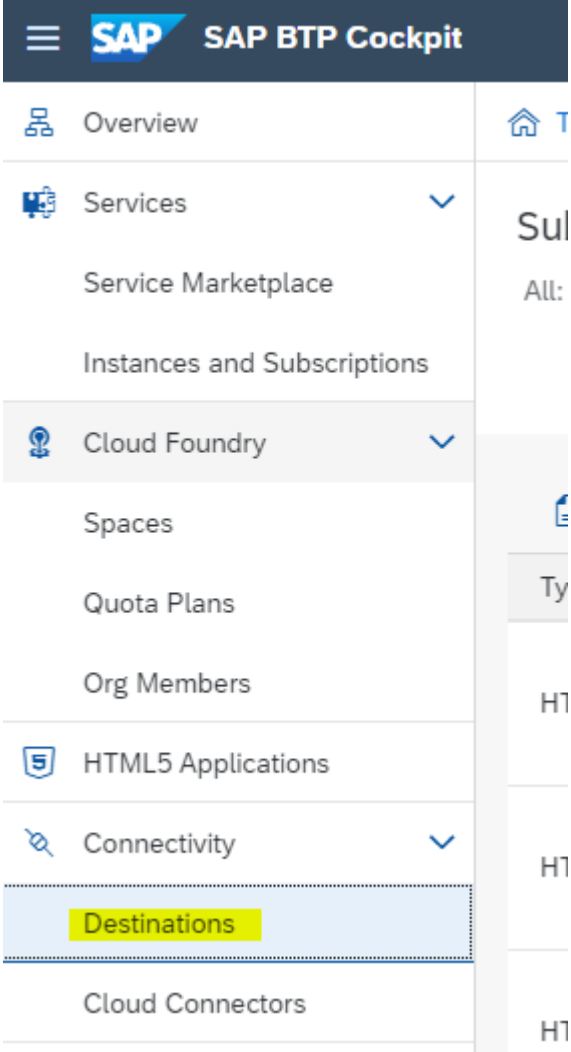

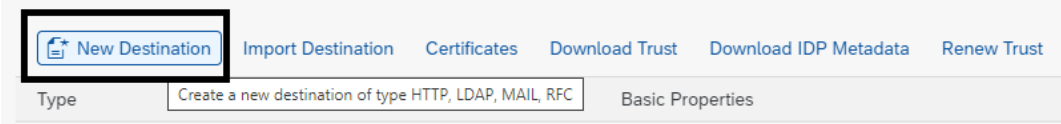

## II. Create the application namespace

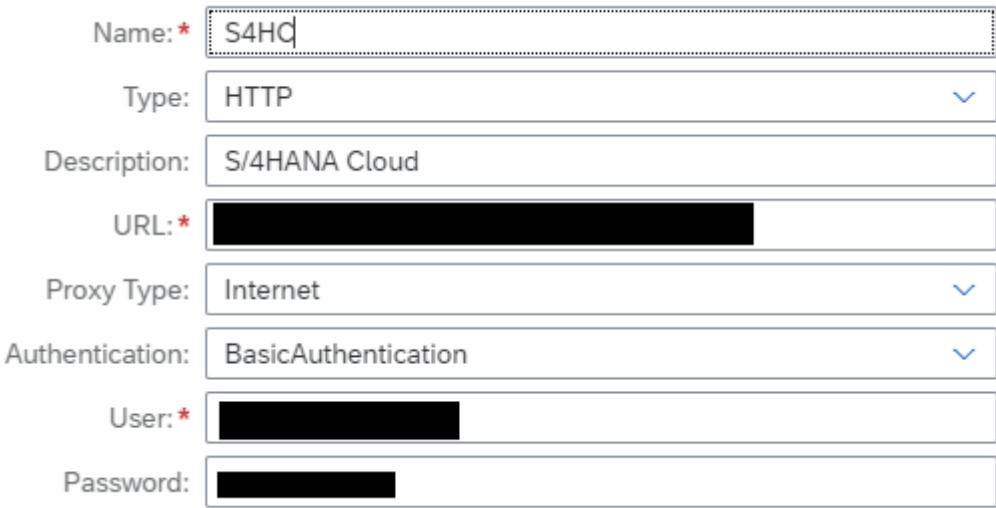

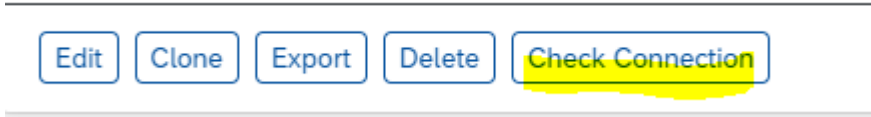

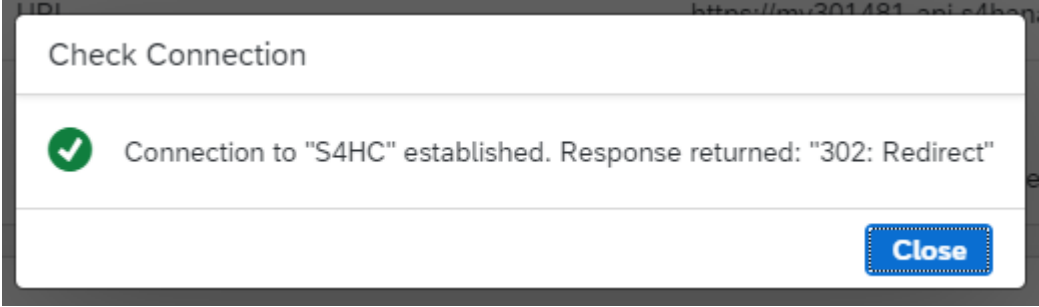

Explanation	Screenshot
<p>In the Kyma Console UI click on <b>Add new namespace</b> in the top right corner</p>	
<p>In the dialog, set:</p> <p>Name: <b>business-partners</b></p> <p>Label: <b>name=business-partners</b></p> <p>Click <b>Create</b>.</p>	

Explanation	Screenshot
You should see a page like the one in the screenshot.	

### III. Create the destination to S/4HANA Cloud

Explanation	Screenshot
Go back to your subaccount cockpit	

Explanation	Screenshot
In the left-hand side menu expand the <b>Connectivity</b> section and click on <b>Destinations</b> .	 <p>The screenshot shows the SAP BTP Cockpit interface. The left-hand menu is expanded to the 'Connectivity' section, which is highlighted with a blue background. Within this section, the 'Destinations' option is highlighted with a yellow box. Other options visible in the menu include Overview, Services, Service Marketplace, Instances and Subscriptions, Cloud Foundry, Spaces, Quota Plans, Org Members, HTML5 Applications, and Cloud Connectors. The right-hand side of the interface shows a list of destinations, with the first one labeled 'Sul' and 'All:'.</p>
Click on <b>New Destination</b> .	 <p>The screenshot shows the 'Subaccount: trial - Destinations' page. The 'New Destination' button is highlighted with a black box. Other buttons visible include 'Import Destination', 'Certificates', 'Download Trust', 'Download IDP Metadata', and 'Renew Trust'. Below the buttons, there is a section for 'Type' with a dropdown menu showing 'Create a new destination of type HTTP, LDAP, MAIL, RFC' and a 'Basic Properties' tab.</p>

Explanation	Screenshot
<p>Fill-in the destination info accordingly:</p> <p>Name: any name of your choice (i.e. S4HC – just a suggestion)  Type: HTTP  Description: S/4HANA Cloud  URL: URL of your S/4HANA Cloud tenant  Proxy Type: Internet  Authentication: BasicAuthentication  User: username of your communication user  Password: password of your communication user</p> <p>Click <b>Save</b>.</p>	
<p>In the bottom bar click <b>Check Connection</b>.</p>	
<p>If successful, you should see a dialog like the one in the screenshot.</p> <p>Just click <b>Close</b>.</p>	

#### IV. Build and push the Docker images

Explanation	Screenshot
Open the project folder cloned from the Git Repo in your VS Code.	 <p>A screenshot of the VS Code File Explorer showing the project structure of 'business-partners'. The folder is expanded, showing subfolders like .vscode, app, bp-function, db, helmcharts, srv, test, and files like .cdsrc.json, .env, .gitignore, Dockerfile, Makefile, package-lock.json, package.json, README.md, and xs-security.json.</p>
In the <b>File Explorer</b> on the left-hand pane, open the file <b>package.json</b> and replace the place holder <b>&lt;your destination name&gt;</b> with the name of the destination you created at the previous section (i.e. S4HC).  <b>Save the file.</b>	 <p>A screenshot of the package.json file showing the configuration for the API_BUSINESS_PARTNER. The configuration is a JSON object with the following properties: "kind": "odata", "model": "srv/external/API_BUSINESS_PARTNER", "credentials": { "destination": "&lt;your destination name&gt;", "path": "/sap/opu/odata/sap/API_BUSINESS_PARTNER" }. The placeholder text "&lt;your destination name&gt;" is highlighted in the screenshot.</p>

Explanation	Screenshot
<p>From the menu <b>Terminal</b> select <b>New Terminal</b> to open the command terminal.</p>	 <p>The screenshot shows the Visual Studio Code interface. At the top, the 'Terminal' menu is open, displaying options: 'New Terminal' (with keyboard shortcut Ctrl+Shift+'), 'Split Terminal' (Ctrl+Shift+5), 'Run Task...', 'Run Build Task...' (Ctrl+Shift+B), 'Run Active File', 'Run Selected Text', 'Show Running Tasks...', 'Restart Running Task...', 'Terminate Task...', 'Configure Tasks...', and 'Configure Default Build Task...'. Below the menu, the 'TERMINAL' tab is active, showing a Windows PowerShell prompt at 'PS C:\BTP\Kyma&gt;'.</p>
<p>CD into the root folder of the project:</p> <p><b>cd &lt;your project root&gt;</b></p>	 <p>The screenshot shows the Visual Studio Code terminal window. The terminal output includes the Windows PowerShell prompt and the command 'cd business-partners' being executed. The prompt is now 'PS C:\BTP\Kyma\business-partners&gt;'.</p>

Explanation	Screenshot
<p>Build the CAP application with the command:</p> <p><b>cds build --production</b></p>	
<p>Check the <b>logs in the console</b>, as well as the <b>file explorer</b> to verify the contents of the folder <b>gen\srv</b> has been properly generated.</p>	
<p>In the <b>File Explorer</b> on the left-hand pane, open the <b>Makefile</b> and replace the place holder <b>&lt;your docker account&gt;</b> with the name of the Docker account you must have created as per the 9<sup>th</sup> prerequisite of this document.</p> <p><b>Save the file.</b></p>	

Explanation	Screenshot
<p>Build and push the Docker images with the command:</p> <p><b>make push-images</b></p>	 <p>Terminal screenshot showing the command <code>make push-images</code> being executed in a PowerShell window. The window title is 'PS C:\BTP\Kyma\business-partners&gt;'. The command is highlighted in yellow.</p>
<p>When the process is completed access the VS Code Docker extension the left-hand panel clicking on the icon in the screenshot.</p>	 <p>Screenshot of the Docker extension icon in the VS Code left-hand panel. The icon is a white ship on a dark background.</p>
<p>Expand the <b>Images</b> node and check whether the two images have been created.</p>	 <p>Screenshot of the Docker extension 'Images' node expanded. It shows two images: 'alebiagi/caps4bp' (latest, 18 days ago) and 'alebiagi/caps4bpui' (latest, 20 days ago).</p>
<p>Expand the <b>Registries</b> node and the <b>Docker Hub</b> node. You should see your <b>Docker account</b> listed like in the screenshot.</p>	 <p>Screenshot of the Docker extension 'Registries' node expanded. It shows 'Docker Hub' and 'alebiagi'.</p>
<p>Expand your <b>Docker account</b> and check whether the two images have been pushed</p>	 <p>Screenshot of the Docker extension 'Registries' node expanded. It shows 'Docker Hub' and 'alebiagi'. Under 'alebiagi', there are two images: 'caps4bp' (latest, 18 days ago) and 'caps4bpui' (latest, 18 days ago).</p>

## V. Adjust the Helm Charts values

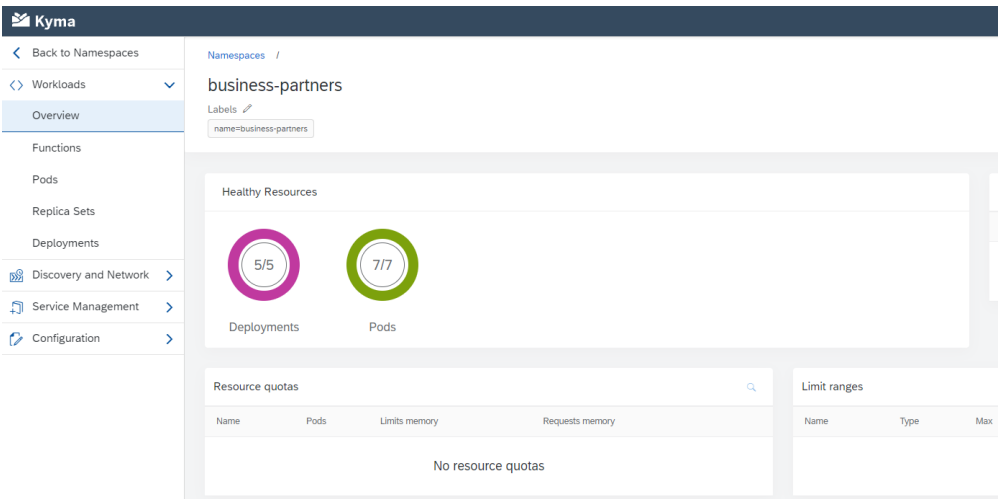

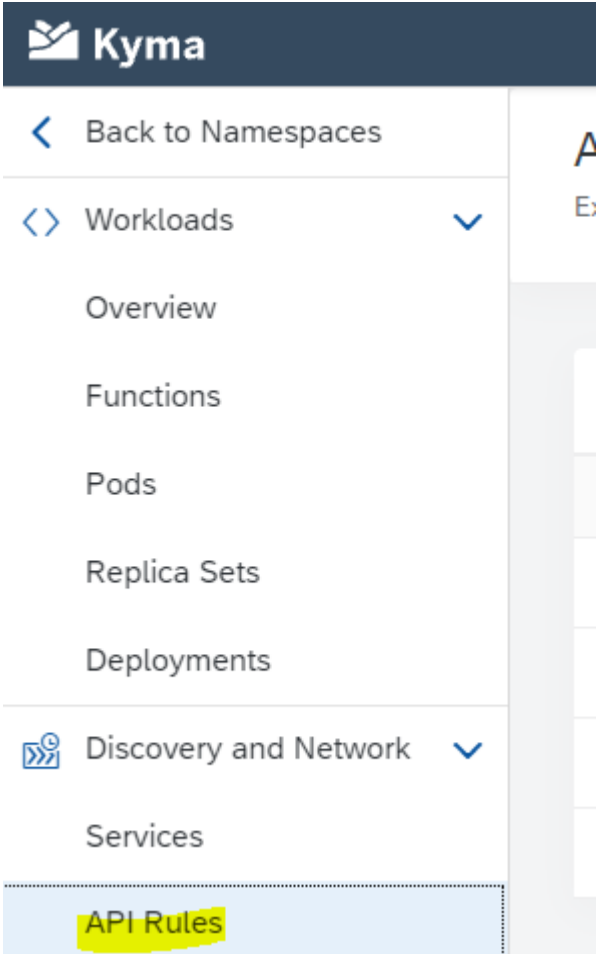

Explanation	Screenshot
Go back to the Kyma Console UI	
Look at the URL in browser and copy the cluster URL (text right after “console.” stopping right before the slash to the clipboard, like demonstrated in the screenshot.	
<p>In the <b>File Explorer</b> on the left-hand pane, expand the <b>helmcharts</b> folder and open the file <b>values.yaml</b>.</p> <p>Replace the place holders accordingly:</p> <p>Over <b>&lt;your docker account&gt;</b> write your account name</p> <p>Over <b>&lt;your cluster url&gt;</b> paste the value copied in the previous step</p> <p>Over <b>&lt;your destination name&gt;</b> write the name of</p>	

Explanation	Screenshot
<p>the destination created at section III (i.e. S4HC).</p> <p><b>Save the file.</b></p>	

## VI. Install the package

Explanation	Screenshot
<p>In the terminal, CD to the <b>helmcharts</b> folder.</p>	 <pre> TERMINAL  SQL CONSOLE  PROBLEMS  OUTPUT  DEBUG CONSOLE PS C:\BTP\Kyma\business-partners&gt; cd helmcharts PS C:\BTP\Kyma\business-partners\helmcharts&gt; </pre>
<p>Install the package with the command:</p> <p><b>helm install manage-bp ./ -n business-partners</b></p>	 <pre> TERMINAL  SQL CONSOLE  PROBLEMS  OUTPUT  DEBUG CONSOLE PS C:\BTP\Kyma\business-partners\helmcharts&gt; helm install manage-bp ./ -n business-partners </pre>
<p>After some seconds you should see the contents displayed in the screenshot in the logs of your console.</p>	 <pre> TERMINAL  SQL CONSOLE  PROBLEMS  OUTPUT  DEBUG CONSOLE PS C:\BTP\Kyma\business-partners\helmcharts&gt; helm install manage-bp ./ -n business-partners NAME: manage-bp LAST DEPLOYED: Mon Oct 18 14:51:50 2021 NAMESPACE: business-partners STATUS: deployed REVISION: 1 TEST SUITE: None PS C:\BTP\Kyma\business-partners\helmcharts&gt; </pre>

## VII. Test the application

Explanation	Screenshot
<p>It's going to take a couple of minutes until all deployments and pods are running healthy in your Kyma namespace.</p> <p>So, go back to your Kyma Console UI and wait until it shows a status exactly like in the screenshot.</p>	
<p>On the left-hand pane expand <b>Discovery and Network</b> and click on <b>API Rules</b></p>	

Click on the URL next to the **manage-bp-app-router** API Rule, like demonstrated in the screenshot to open the application.

## API Rules

Expose Services outside the cluster with API Rules.

Name	Host
<a href="#">managa-bp-ui-approuter</a>	<a href="https://managa-bp-ui-approuter.b77cd9f.kyma.shoot.live.k8s-hana.ondemand.com">https://managa-bp-ui-approuter.b77cd9f.kyma.shoot.live.k8s-hana.ondemand.com</a>
<a href="#">managa-bp-updfunc</a>	<a href="https://managa-bp-updfunc.b77cd9f.kyma.shoot.live.k8s-hana.ondemand.com">https://managa-bp-updfunc.b77cd9f.kyma.shoot.live.k8s-hana.ondemand.com</a>
<a href="#">managa-bp-caps4bp</a>	<a href="https://managa-bp-caps4bp.b77cd9f.kyma.shoot.live.k8s-hana.ondemand.com">https://managa-bp-caps4bp.b77cd9f.kyma.shoot.live.k8s-hana.ondemand.com</a>
<a href="#">managa-bp-eventpub</a>	<a href="https://managa-bp-eventpub.b77cd9f.kyma.shoot.live.k8s-hana.ondemand.com">https://managa-bp-eventpub.b77cd9f.kyma.shoot.live.k8s-hana.ondemand.com</a>

A new tab should be opened in your browser displaying a tile like in the screenshot.

Click on the **Business Partners** tile.

In the next page click on the **Go** button.

In the first click it's going to take a couple of seconds until the Business Partners list is displayed like in the screenshot. This is due to the in-memory table creation and fill-up at first access.

Click on the **Create** button to create a new Business Partner.

The screenshot shows the SAP Business Partners list. At the top, there's a header bar with the SAP logo and 'Business Partners'. Below it, a search bar and filters are visible. The main area displays a table with columns: Business Partner ID, Name, and Birth Date. The table contains 12 rows of data, including bootcamp participants and test users. A 'Create' button is located at the top right of the table.

Business Partner ID	Name	Birth Date
0A000001	Kyma - A Bootcamp (1) - A	Sep 9, 1990
0A000002	George Herold	
0A000003	Kyma - B Bootcamp (2) - B	Sep 9, 1990
0A000004	Kyma - C Bootcamp (3) - C	Sep 9, 1990
0A000005	Kyma - D Bootcamp (4) - D	Sep 9, 1990
0A000006	Kyma - E Bootcamp (5) - E	Sep 10, 1990
0A000007	Kyma - F Bootcamp (6) - F	Sep 9, 1990
0A000008	Kyma - G Bootcamp (7) - G	Sep 14, 1990
10000000	Amanda Herold	
10000010	John 01 Doe	
10000011	John Doe	
10000012	Pavel Test 02	

Provide a Business Partner ID that does not exist yet in the S/4 system and click on **Create**.

The screenshot shows the SAP Business Partner creation form. The form is titled '(Unnamed Object)'. It has fields for Name, Business Partner ID, First Name, Last Name, and Birth Date. A 'Create' button is visible at the bottom right. A small 'Create' dialog box is open, showing the 'Business Partner ID' field with a value '1'.

Provide First Name, Last Name and Birth Date.

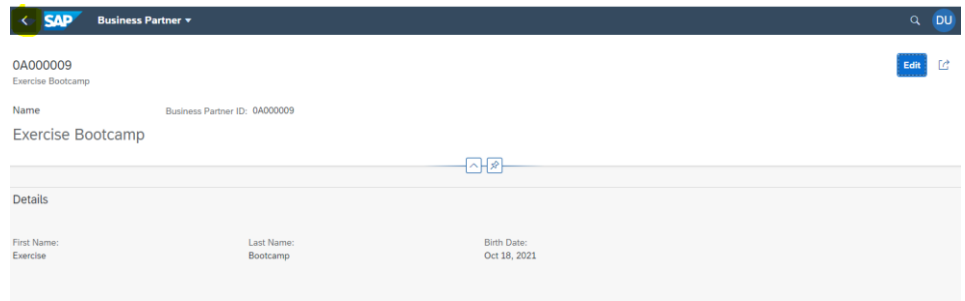

Click on **Create**.

The screenshot shows the SAP Business Partner creation form with data entered. The Business Partner ID is '0A000009'. The First Name is 'Exercise', the Last Name is 'Bootcamp', and the Birth Date is 'Oct 18, 2021'. The 'Create' button is highlighted with a yellow circle.

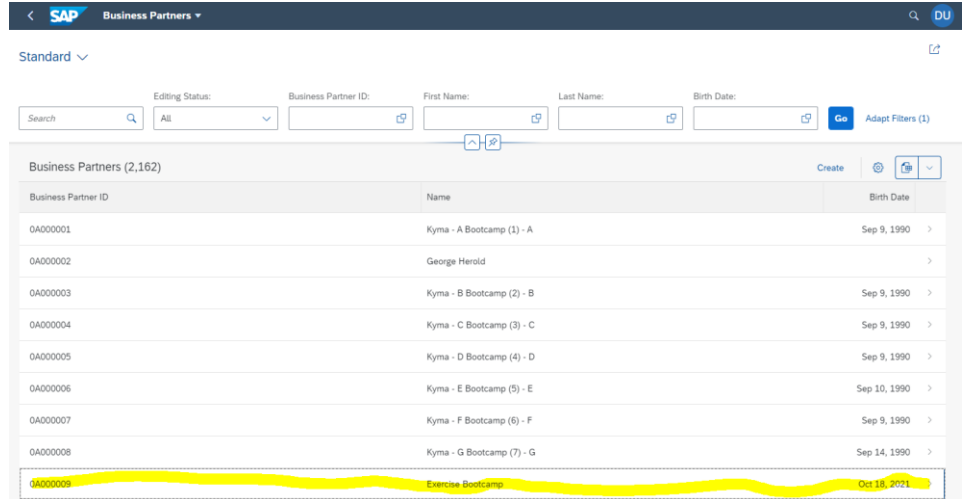

First Name	Last Name	Birth Date
Exercise	Bootcamp	Oct 18, 2021

Check that the Business Partner has been successfully created and click on the arrow at the top left corner to go back to the Business Partners list.

The screenshot shows the SAP Business Partner details for ID OA000009. The name is "Exercise Bootcamp". The details section shows: First Name: Exercise, Last Name: Bootcamp, Birth Date: Oct 18, 2021. An "Edit" button is in the top right corner.

In the list, locate the newly created Business Partner and click on it.

The screenshot shows the SAP Business Partners list. The table has columns: Business Partner ID, Name, and Birth Date. The newly created partner, OA000009, is highlighted in yellow. It is named "Exercise Bootcamp" and has a birth date of "Oct 18, 2021".

Business Partner ID	Name	Birth Date
OA000001	Kyma - A Bootcamp (1) - A	Sep 9, 1990
OA000002	George Herold	
OA000003	Kyma - B Bootcamp (2) - B	Sep 9, 1990
OA000004	Kyma - C Bootcamp (3) - C	Sep 9, 1990
OA000005	Kyma - D Bootcamp (4) - D	Sep 9, 1990
OA000006	Kyma - E Bootcamp (5) - E	Sep 10, 1990
OA000007	Kyma - F Bootcamp (6) - F	Sep 9, 1990
OA000008	Kyma - G Bootcamp (7) - G	Sep 14, 1990
OA000009	Exercise Bootcamp	Oct 18, 2021

Click on the **Edit** button on the top right corner.

This screenshot is identical to the one above, but the "Edit" button in the top right corner is highlighted with a yellow circle.

Change the information on the fields at your will and click on **Save**.

## Congratulations!

You have successfully completed the exercise!

To claim your expert badge, just **submit the exact same screenshots** of this topic taken from your own deployment to the corresponding **MS Teams Channel**.

## APPENDIX

### Stretch and challenge yourself!

Now that you have successfully completed the exercise you can go further and try the application in different modes using the **Kyma eventing feature**.

In the **values.yaml** file of the helm charts, just change the **updatemode** variable to **in-cluster** (to publish the even from inside the cluster) or **out-cluster** (to publish the event from outside the cluster).

Then, to update your deployment, CD to the helmcharts folder and run:

**helm upgrade manage-bp ./ -n business-partners**

After the command successfully completes, repeat the steps in the last block of the exercise to test the application.

Please note that this is **totally optional** thus **will not be required** for the expert badge request.
